

Mass being energy , mass in transit provides - becomes useful energy , examples are solar plasma , air and water . Respectively , solar plasma through the electron spin mechanism - right - left radiates electro - magnetic flux , which when passing through a transformer flips - spins the electrons therein present , becoming recognized as useful electrical energy . Air in transit is captured and changed by wind power into electrical generating devices . The power of gravity from water accumulations upstream further provides another electron spin device - generator which extracts - drives useful energy .

Further the incoming Solar Plasma mechanism is here visible as the device which spins - rotates the Earth . We know the weight and rate of rotation - spin therefore can calculate the effect in watts and horsepower this therefore being the Ambient Background Energy everywhere present. Respectively this is recognized - refereed too as the Sea of Energy and Tesla's Wheel Works of Nature .

The overriding concern of the Scientific Community is that [mass can nether be created or destroyed , it can only be changed] Nothing here presented changes this . However mass in transit through the electron spin mechanism radiates electro - magnetic flux which is when captured and used is Free Energy as described by Gibbs , being the excess left over following a reaction - change . Through amplification of the Magnetic Flux as seen when using High Voltage - High Frequency [Election Spin Mechanism]- being a Spark Gap - Off - On Device incorporates the Ambient Background capturing extra energy not accounted for . To the Dunderheads this is interpreted as a violation of the Law's of Physics , which it is not . Further , high Magnetic Permeability of Magnetic Flux behaves - reacts similar too negative resistance , when present in Transformers [as in MetGlas with Cobalt] provides additional amplification , directly related to frequency . This form of amplification is commonly observed in radio type devices .
Please note that a 20,000. Volt - 200 Amp Diode Bridge was instantly vaporized by a physical test of the System herein described .

Magnetic Flux sensitivity increase has the same effect as negative resistivity , this is demonstrated when using materials such as Metglas . The Lorentz factor [equal and opposite] does not apply to magnetic flux . Interrupting current flow creates - results flux forces , one of which is magnetic , therefor the source of natural magnetic energy is caused by something which interferes with natural current flow . The spark gap is a dramatic form of this . It is also the open door to the source [Earth's Ambient Energy] being an endless energy source . Plasma is a physical expression of magnetic flux , therefore the solar wind incoming to the Earth causes it to spin . We know the weight of the Earth and the spin rate and therefore can calculate the required energy to do this , in watts and horsepower .
