

TESLA RADIANT ENERGY TRANSFORMER POWER SOURCE

----- As per his simple Patent showing his RADIANT Energy Collector

----In our Case the Collector Circuit is exchanged as a custom

constructed cobalt - nickle - steel transformer . This works as the Magnetic Equivalent of a huge negative resistance , resulting in very large amplification of the Magnetic Flux Energy which is increased , output verses input . In our case we use the input Resonate RADIANT Energy Source added is shown from the recent Don Smith Device .

Additionally a huge increase in the Resonate Magnetic Flux is provided by sparking arrangement . Therefor , more energy out than in results in Self Powered Energy Devices .
