

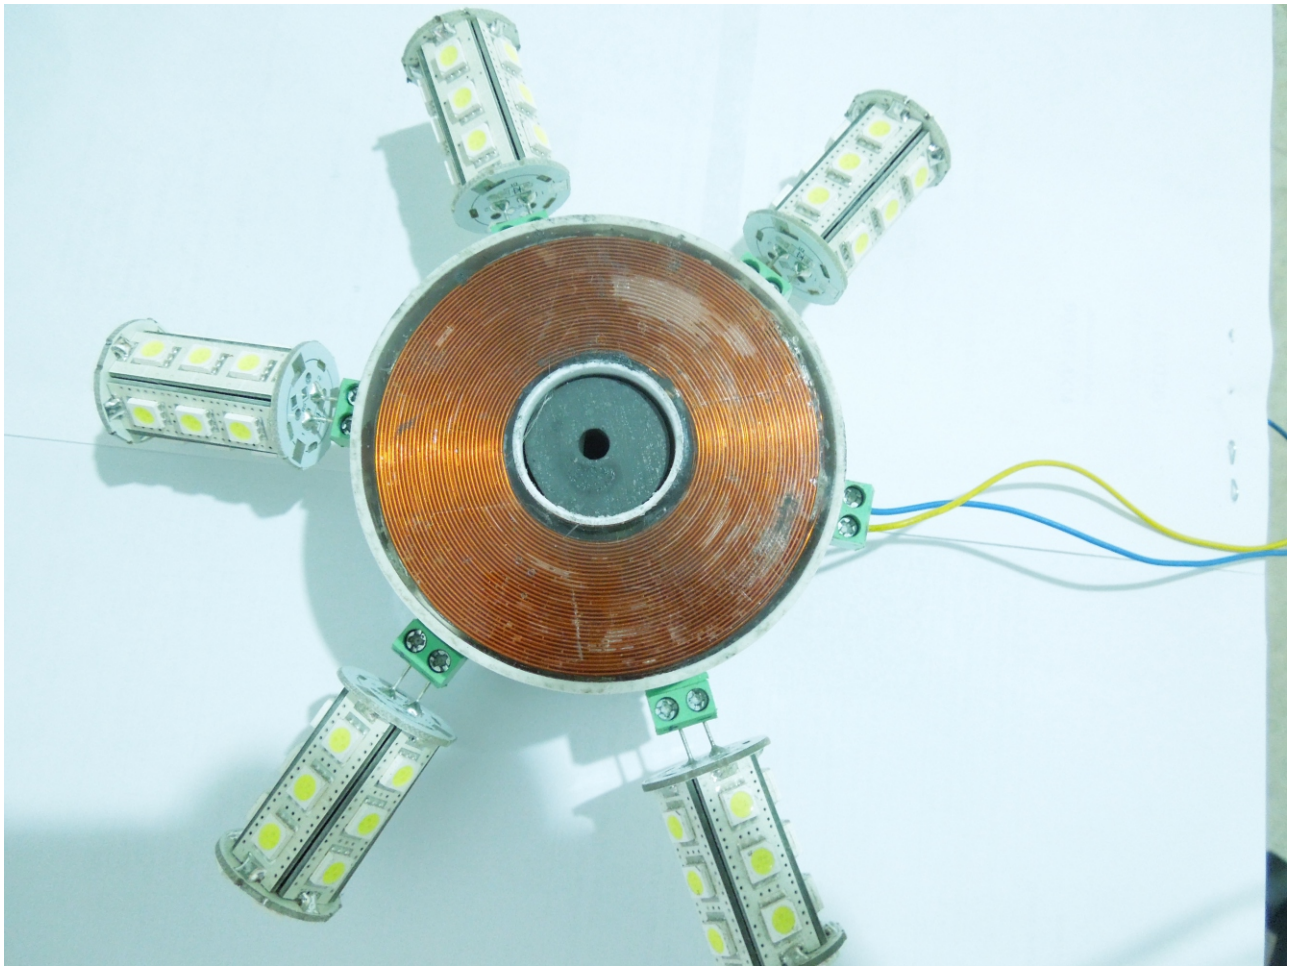

Fig.123

The multifilar PANCAKE COIL consist of a group of six pancake coils, every group have four pancake coils connected in “series”. In total i have 24 pancake coils inside of the PVC PIPE and all the groups are insulated from each other, only one of the six groups is connected to the circuit and the other five groups, sadwiches coils, they are not connection, only with the bulb of leds, they are “like pickup coils”

When i pulse the circuit, one of the goups “induces” the voltage to the rest of the groups and the leds turn on with great intensity...!
